## BrightWork 365

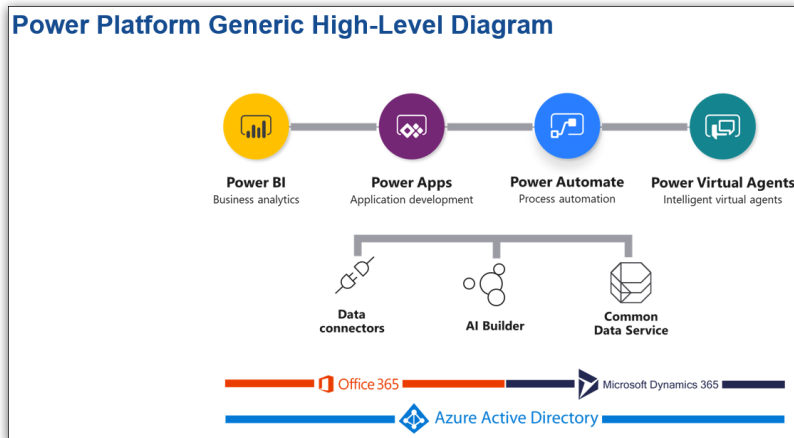

- BrightWork 365 ties together several powerful solutions including those in your organization's instance of Microsoft 365, allowing you to fully leverage your investment in this powerful platform.
- With over 25 years of experience and innovation with productivity solutions, BrightWork solutions let you hit the ground running with project management process templates with best practices built right in.
- Simplify task management with resource allocation and work reports.
- Manage deadlines with interactive Gantt charts and simple to use, yet powerful scheduling.

## Microsoft 365

- Centralize project processes and information in one hub, working across Microsoft Teams, Microsoft Apps (Word, Excel, and OneNote), Power BI, Power Automate and SharePoint Online.
- Microsoft's security and compliance capabilities can be relied upon to protect data and users.

## Microsoft Power Platform

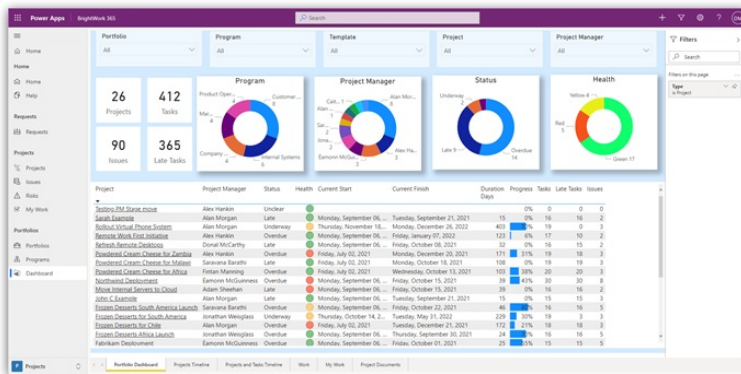

- BrightWork 365 is a Power App managed solution installed in a Microsoft Power Platform environment. The app is sandboxed into the environment and only users given access to the environment can use the app.
- BrightWork 365 uses the Power Platform Dataverse for data storage. A basic environment = 1 GB

of database storage. The first Power Apps Premium/Power Apps per user license enables 10 GB, and small increments are provided for each additional license purchased from Microsoft.

- Microsoft Power Apps lets your organization deploy a model-driven app to manage the full project lifecycle from initial project request to project completion.
- Built in workflow capabilities let you automate processes for efficiency and accuracy, freeing you up to focus on managing your initiatives.

## Microsoft Power BI

Microsoft Power BI allows users to get rich insight into BrightWork 365 portfolio data including timeline, resource allocation, and tasks, all displayed within interactive reports.

## Microsoft Power Automate

BrightWork 365 also interacts with parts of Microsoft 365 through Microsoft Power Automate. BrightWork 365 uses several out-of-the-box Power Automate connectors including:

- **Office 365 Outlook - Connectors:** Used to send notification emails in approvals.
- BrightWork 365 uses **HTTP with Microsoft Entra ID Connectors** (formerly known as HTTP with Azure AD Connectors) to:
  - Get the list of MS Teams that the install user has access to and update the MS Teams table in the app.
  - Create a channel for the project in the Team associated with the program that the project sits in.
- BrightWork 365 uses the following connectors specifically in the environment within which BrightWork 365 is installed:
  - **Microsoft Dataverse - Connectors:** Used to Create, Read, Update and Delete rows in the Dataverse tables in BrightWork 365.
  - **Approvals - Connectors:** Communicates with the native approvals app that is used for approving requests for project creation and other approvals.

**Tip** For the most optimal user experience, see Microsoft's Power Apps System Requirements [article](#).
