

Content Templates

Project Management Context

Users have the option to create a special type of template from an existing project that will include the content from that project - these templates are called Content Templates. The content copied over to the template will include data from the tabs Stages, Deliverables, Tasks, Issues, Risks, and Project Settings. The only documents that get brought over are those from Gantt deliverable tasks.

Work assignments for Gantt Tasks, Issues, Risks, etc., are not copied over as part of the content template creation process. However, Gantt Task assignments can be manually added to content templates after they have been created and these will be copied over to new projects.

Content Templates are a great way to give your project manager colleagues a head start using best practice templates from other similar projects.

Create a Content Template from an Existing Project

To create a Content Template from an existing project:

1. In the project's **Project Settings** section, set the **Copy to New Content Template** slider to **Yes**, and click **Save**.

The screenshot shows the 'Project Settings' tab selected in a navigation menu. The settings are as follows:

Field	Value	Additional Info
Name	* Frozen Desserts for S...	Reset Target Dates in all Project Tasks: <input type="checkbox"/> No
Type	Project	
Owner	* Donal McCarthy	
Copy to New Content Template	<input checked="" type="checkbox"/> Yes	

You will find the new template in the **Content Templates view** in the **Projects Area** once the associated workflow has run. When the content template is ready to be used, the user that initiated the creation process will receive an email.

The content template itself will not be used to create new projects - new projects will need to be created from a Project Template that is associated with the Content Template. To create the new project template that can then be used to create new projects, continue with the instructions for creating templates in the [template configuration](#) article.

Note

- The Project Manager of a content template is initially set to the person who initially created the content template; this value is ignored when the content template is reused.
- Gantt Chart task dependency offsets are not saved to content templates.
- Although Content Templates will include any custom Form Tabs, Sections, and Columns, data from these custom elements will not be passed on to any newly created projects that are associated with the Content Template.
- If you plan on creating a new project from a project that was itself created from another project (daisy chaining with Content Templates), do not click into a Deliverable from a task form (e.g., from a Stage listed in the Stages tab). To remove an existing document folder, create a copy of the item and then delete the item with the document folder reference.

Caution

- If you delete a content template from the Projects section of the Projects Area, the content

template will also be removed from any templates that are referencing it.

- Working Week Days are copied to content templates, but Project Exception Days are not.
- When creating projects from templates associated with content templates, only one dependency per task is copied to the new project.

Edit an Existing Content Template

1. Click the **Projects** link in the main nav.
2. Switch the current view to the **Content Templates** view.

3. Choose the relevant content template and edit as necessary.
4. Save and close the updated content template.

Note Edits to an existing content template will not be propagated to projects created prior to the new edits.
