

Configure BrightWork 365 Graph Client App

Note This article is for customers using BrightWork 365 version 2025-2 or later who have not already completed these steps as part of the solution install.

Introduction

BrightWork 365 2025-2 introduces new Flexible Microsoft Teams and Document Management features that enable users with the correct permissions to select a Teams Channel to associate with projects, programs, and portfolios.

The files tab in this channel then becomes the document location for the project, program, or portfolio. Alternatively, users can select another SharePoint document library folder to use as the document location for the project, program, or portfolio. Users do this via pickers that use a Microsoft Graph API to only return the Teams and SharePoint locations to which the logged-in user has access.

For this to work, it is necessary to add an app registration that delegates the necessary permissions to make the Graph API query on behalf of the logged in user.

At a high level, the app allows the user to:

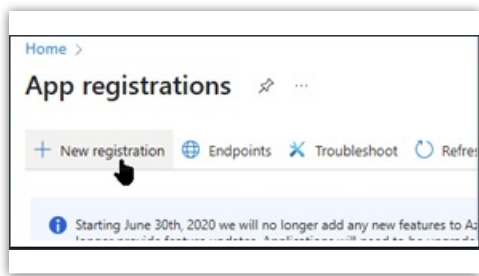

- Select a Channel in Microsoft Teams (to which they must have access) to associate with a project, program, or portfolio.
- Optionally create a tab for the project, program, or portfolio in that channel.
- Select an alternative SharePoint document library or folder to use as the document location for the project, program, or portfolio.

It is important to stress that this app registration does not give users any extra permissions or access – it just leverages the permissions and access that users already have.

Add the App

Note You need at least the [Cloud Application Administrator](#) role (Microsoft Learn link) to create the app. A user with the role of [Privileged Role Administrator](#) (Microsoft Learn link) will need to approve the permissions granted by the app.

1. Login to <https://entra.microsoft.com/>.
2. Expand Applications in the Identity section and click **App registrations**.
3. Click **+ New Registrations**.

4. Enter 'BrightWork 365 Graph Client' in the Name field.
5. Select **Accounts in this organizational directory only (Single tenant)**.
6. Select **Single-page application (SPA)** from the Redirect URI section and enter the URL of the BrightWork 365 environment.
7. Click **Register**.

The screenshot shows the 'Register an application' form in the Azure portal. The form is filled out with the following information:

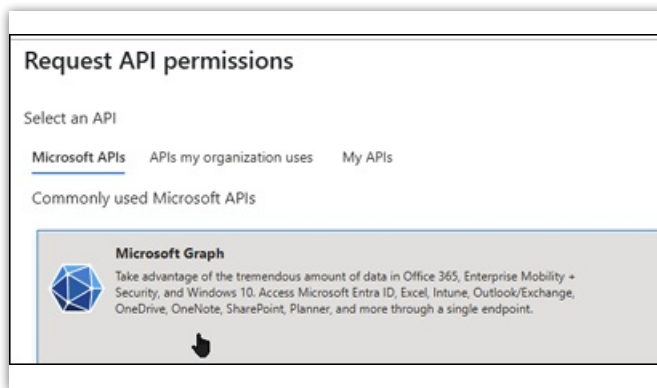

- Name:** BrightWork 365 Graph Client
- Supported account types:** Accounts in this organizational directory only (only - Single tenant)
- Redirect URI (optional):** Single-page application (SPA) with the URL https://bw365-2023-2-demo.crm.dynamics.com

At the bottom of the form, there is a 'Register' button and a link to 'Enterprise applications'.

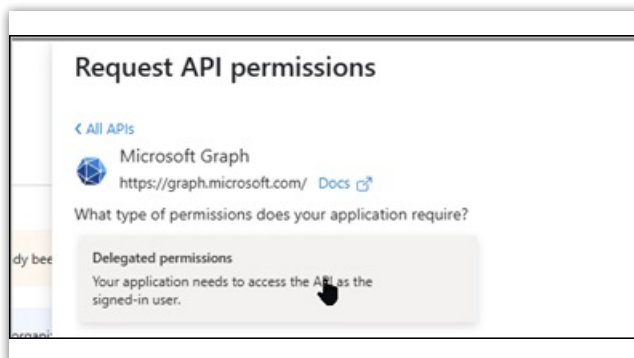

8. Click **API Permissions | + Add a permission**.

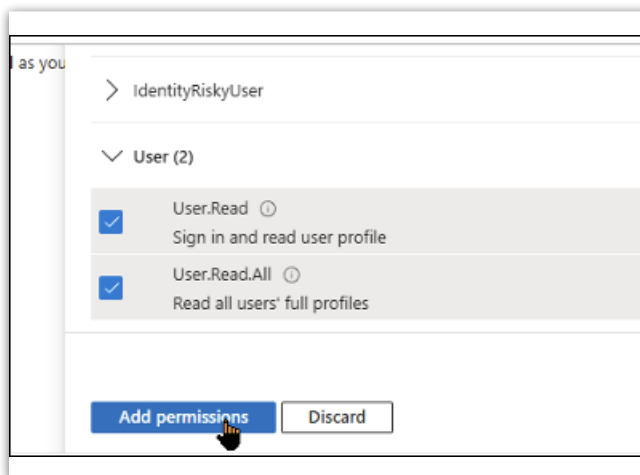

9. Click **Microsoft Graph**.

10. Click **Delegated permissions**.

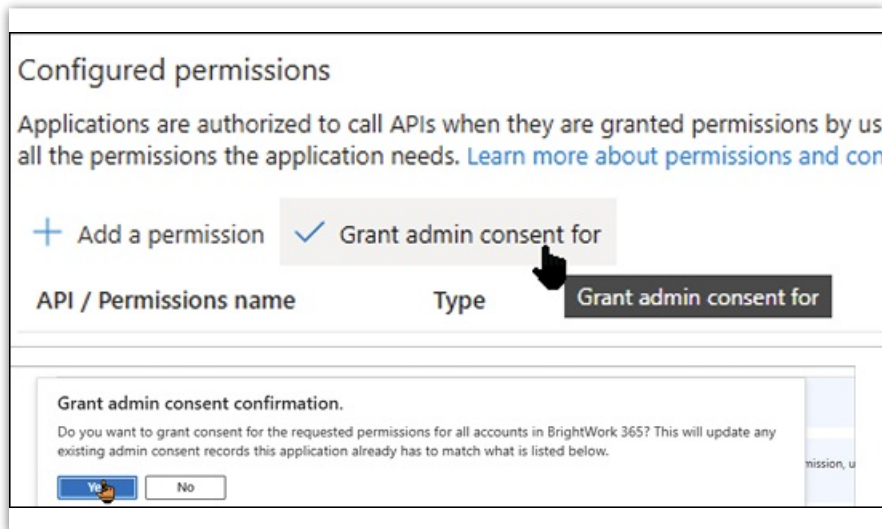

11. Enter User.Read in the filter, select **User.Read** and **User.Read.All** and click **Add permissions**.

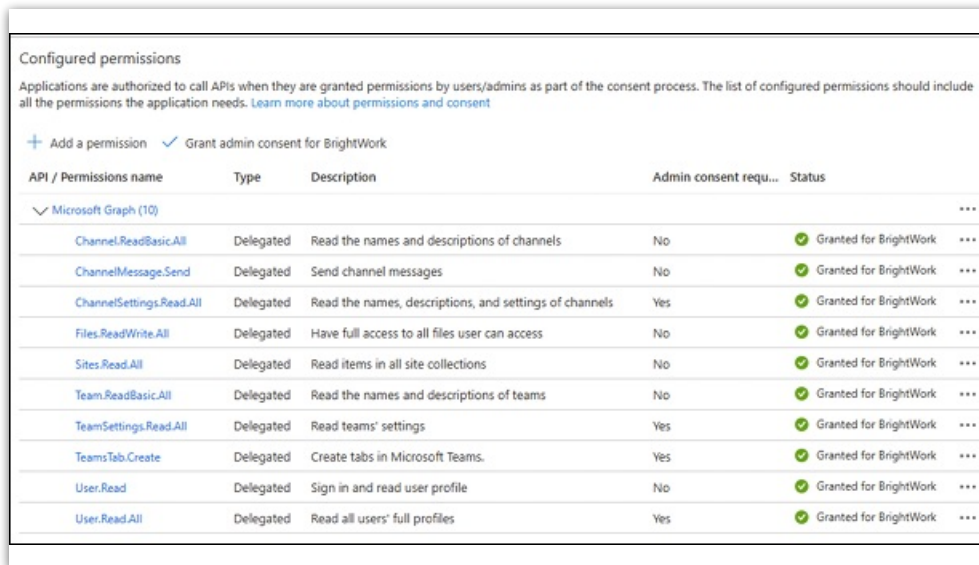

12. Repeat these steps for the following permissions:

1. Channel.ReadBasic.All
2. ChannelMessage.Send
3. ChannelSettings.Read.All
4. Files.ReadWrite.All
5. Sites.Read.All
6. Team.ReadBasic.All
7. TeamSettings.Read.All
8. TeamsTab.Create
9. User.Read
10. User.Read.All

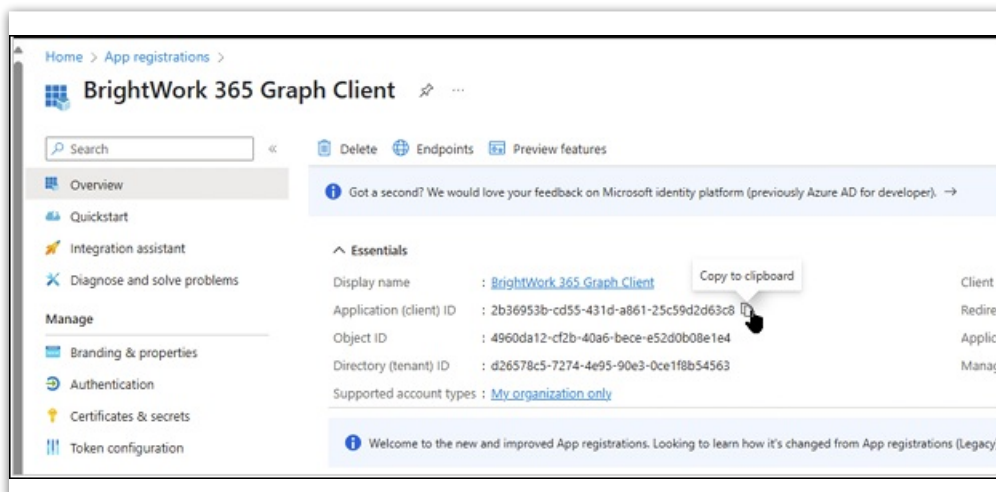

13. Click **Grant admin consent for** and then **Yes** to confirm.

The Configured permissions section should look like the below:

14. Click **Overview** and copy the Application (client) ID and Directory (tenant) ID to a text editor.

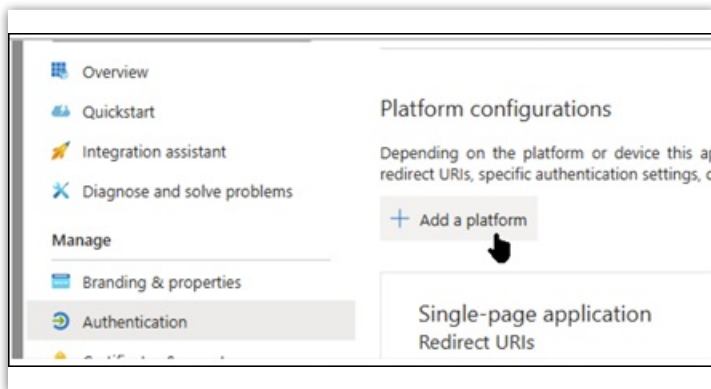

15. Bookmark this page.

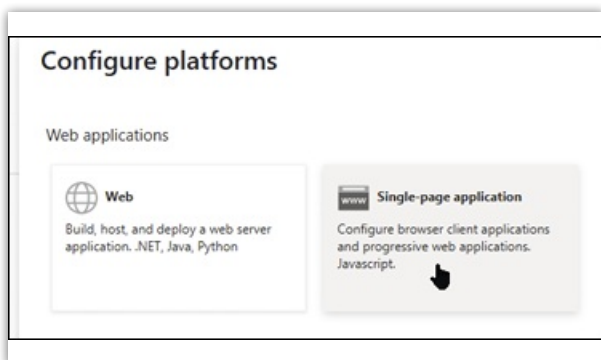

Add Environment to the App

Every BrightWork 365 Environment in which you want to use the app must be added to the app.

1. Navigate to the BrightWork 365 Graph Client app registration home page.
2. Click **Authentication** on the navigation.
3. Click **+ Add a Platform**. You may need to switch to the 'old experience' to see this option.

4. Click **Single-page application**.

5. Paste the environment URL and click **Configure**.

Configure single-page application

[All platforms](#)[Quickstart](#)[Docs](#)

The latest version of MSAL.js uses the authorization code flow with PKCE and CORS. [Learn more](#)

*** Redirect URIs**

The URIs we will accept as destinations when returning authentication responses (tokens) after successfully authenticating or signing out users. The redirect URI you send in the request to the login server should match one listed here. Also referred to as reply URLs. [Learn more about Redirect URIs and their restrictions](#)
